

Clover Flex

Handheld POS

Portable “All-in-One” Device:

A powerful handheld POS system with a 6” high-resolution touchscreen. It’s small enough to carry around your store or restaurant, yet it packs the capabilities of a full register in your hand.

Built-in Printer & Scanner:

Clover Flex has an internal thermal receipt printer (2¼” paper) and a barcode scanner/camera built in. This means you can print customer receipts on the spot and scan product barcodes or QR codes for inventory or payment links without any extra hardware.

Accepts All Payment Methods:

Swipe magstripe cards, insert EMV chip cards, or tap contactless payments – the Flex can do it all. It supports NFC for Apple Pay, Google Pay, Samsung Pay, as well as gift cards or QR code payments, ensuring you never miss a sale due to payment preference.

Long Battery Life & Charging Cradle:

Designed to last a full business day on a charge. It uses a rechargeable Li-Ion battery and charges via a USB-C cable or an optional docking cradle. This means you can undock it for mobile use and dock it when stationary or charging.

Wi-Fi & 4G Connectivity:

Comes with dual-band Wi-Fi for in-store use and an optional 4G/LTE SIM for cellular connectivity. This allows you to take payments anytime, anywhere – great for curbside transactions, food trucks, or festivals. If Wi-Fi drops, it can seamlessly switch to cellular (on models with LTE service).

User-Friendly Interface:

Clover Flex runs Clover’s intuitive Android-based POS software – minimal training is required. The interface supports on-screen signature capture and PIN entry. It’s robust, so you get smooth performance when checking out customers or running apps (like inventory, loyalty, or tipping prompts). It’s also PCI PTS secure and supports end-to-end encryption for all transactions.
