

Clover GO

Mobile Card Reader Platform

Pocket-Sized Card Reader:

Clover Go is an ultra-compact, bring-your-own-device card reader that pairs with your smartphone or tablet. It's lightweight and portable – perfect for mobile businesses, market vendors, or anytime you need to take payments away from a countertop

Accepts Chip, Swipe, and Tap:

Despite its small size, the Clover Go reader is an all-in-one payment device. It accepts EMV chip dips, traditional magstripe swipes, and NFC contactless payments. This means you can take Apple Pay, Google Pay, Samsung Pay and contactless cards, as well as EMV credit/debit cards and gift cards

Bluetooth Connectivity:

The reader connects to your iOS or Android device via Bluetooth Low Energy. No cables required during use – just pair it wirelessly with the Clover Go app on your phone/tablet. (It charges via micro-USB, and you get hours of usage on a single charge.)

Secure and Encrypted:

Clover Go is EMV Level 3 certified and uses end-to-end encryption and tokenization for all transactions. The platform also supports fraud prevention tools and fingerprint login for the app, keeping merchant and customer data safe

Clover Go Mobile App:

The free Clover Go app (for iPhone and Android) turns your device into a full POS. You can ring up sales, apply taxes or discounts, and then take payment through the paired reader. The app also allows for digital receipts (text or email receipts sent directly to the customer) and transaction monitoring in real time

Versatile Use Cases:

Whether you're a contractor taking payments at a customer's home, a vendor at a craft fair, or a café owner adding pay-at-the-table, Clover Go is an affordable and flexible solution. It even has an optional dock accessory to mount the reader on a counter if needed. With Clover Go, your phone becomes a complete cash register in your pocket.
