

Clover Mini

Compact Countertop POS

8" Touchscreen Display:

A compact countertop POS with an 8-inch color touch display. The screen is ample for your staff to run transactions and for customers to view totals or sign on screen, yet the device has a small footprint ideal for limited counter space.

Built-in Receipt Printer:

Clover Mini includes an internal high-speed thermal printer (accepts 2" rolls). You can print receipts without needing a separate printer, which keeps your checkout area tidy. (The printer is conveniently front-loading for easy paper roll changes.)

Accepts All Payment Methods:

It's equipped with an EMV chip card slot, an NFC contactless reader, and a magstripe swipe reader. This means Clover Mini can accept chip-and-PIN or chip-and-signature cards, contactless payments, and traditional swipes – covering all payment methods in one device.

Connectivity Options:

Supports Ethernet and Wi-Fi networking, and even has a 4G/LTE option on certain models (Clover Mini 3 with LTE). This flexibility lets you set it up with a wired connection for stability or use wireless networking. (LTE capability provides backup connectivity or mobile use if needed.)

Accessory Hub:

Comes with multiple USB ports and a cash drawer port. You can easily connect peripherals like a handheld barcode scanner, scale, or cash drawer to expand its functionality into a full POS station.

Versatile Use:

The Clover Mini can run as a standalone POS system for small businesses – it can handle payments, run inventory and loyalty apps, and more. It's also often used in customer-facing mode as part of Clover Station Duo. In either case, it's secure (PCI compliant with end-to-end encryption) and benefits from Clover's robust software ecosystem (app market for additional features).
