

Clover Solo Station

All-in-One POS System

Large 14" HD Touchscreen:

The Station Solo features a huge 14-inch high-definition touchscreen display. This gives you plenty of room to view your POS interface – from ringing up items and viewing inventory to managing employee shifts – all on one screen with easy tapping and swiping.

Complete Hardware Bundle:

Sold as a bundle including the merchant touchscreen, a high-speed receipt printer, and a cash drawer. Right out of the box, you have everything needed for a checkout counter. The printer is fast and reliable (no need to purchase a separate printer), and the cash drawer integrates seamlessly.

Multi-Connectivity (Ethernet/Wi-Fi/LTE):

Clover Station Solo supports Ethernet and Wi-Fi connectivity, and also offers optional 4G/LTE for backup or primary use. You'll have uninterrupted processing – if your internet goes down, the LTE can kick in to keep transactions flowing.

Accepts All Payment Types:

The Solo station accepts magstripe swipes, EMV chip cards, and NFC contactless payments (e.g., tap-and-go via Apple Pay or Google Pay). The card readers are built into the system (often via a customer-facing slot or attached reader) so you can take any payment securely. It even supports gift cards and other payment options through Clover's software.

Built-in Cameras for Scanning:

The Station Solo has dual 5 MP cameras that can be used to scan 1D/2D barcodes on products or loyalty codes. This is great for speeding up checkout (scan items rather than manual lookup) and for contactless customer interactions (scan coupons from phones).

Powerful Software & Management:

Station Solo runs on Clover's robust software platform with full POS functionality: inventory tracking, sales reporting, employee management, and more. The system is fast and it's designed to handle high volume environments. Security-wise, it uses end-to-end encryption and tokenization for payments, keeping customer data safe.
